

Microsoft PowerPoint

What Microsoft PowerPoint Does

Microsoft PowerPoint for iOS is another in the Microsoft Office Suite of productivity tools that is useful for keeping your work with you wherever you go. Microsoft PowerPoint is primarily used as a powerful tool for building unique slideshows for a variety of purposes, from start to finish. Use the Microsoft PowerPoint iOS app whenever you plan to create, review, edit or sharing slide decks and presentations. The app includes a number of different templates in a variety of colors and styles to make your presentations look professional. This app allows you to access your presentations on your mobile device and syncs to your computer so that you can pick up from wherever you were when you last accessed the slideshow. Whether you are preparing for an important speech or want to show your dog walking company's full range of services, the Microsoft PowerPoint for iOS app can make your slides look polished and interesting.

Key Functions

Some of the key functions of Microsoft PowerPoint for iOS allow you to make a highly customized slideshow using a variety of templates, editing tools and special image or video insert features. As with some of the other Microsoft Office Suite productivity apps, you can draw directly on the slides you are your touch-enabled device and collaborate with others using simple sharing, editing and viewing permissions. Once you have created the perfect slideshow, the app also helps you to perfect your presentation with the incredible Presenter Coach feature. Presenter Coach is an AI-enabled feature that accesses your microphone and "listens" you to speak out loud, then offers suggestions like reducing pauses or "umm" fillers. The app also allows you to zoom in on details without altering their fidelity, so that you can see what the slideshow really looks like at scale from your phone. ## Review of Microsoft PowerPoint

The Microsoft PowerPoint for iOS app is a highly functional tool that has some built-in bonus points compared to the desktop version, such as the Presenter Coach. Overall, this app is a great choice for anyone who wants to work on presentations on the go, as it is a streamlined version of the most commonly used features on the desktop program, with a few nice extras. The app works fairly well and fulfills all the core functions that it should handle without much issue.

Advantages / Disadvantages

Benefits of the Microsoft PowerPoint for iOS app: This app makes it easy to place graphics and videos in a presentation on your phone, as well as make use of great collaboration features to involve your entire team in a presentation. Best of all, the app syncs to your desktop computer so you can continue working seamlessly.

Negatives of the Microsoft PowerPoint for iOS app: slideshows tend to be graphics-heavy and the app can sometimes struggle with opening and syncing slideshows that are larger and more graphics intensive, particularly when you are not connected to a stable Internet connection. Like the other Office Suite iOS apps, this one also has so many features it can be hard to figure out where each one is located, which can bog you down as a user.
